

1. Project Overview

This project is a full-stack e-commerce platform designed for small businesses, allowing merchants to build their own product showcase and online shopping website.

The platform supports two modes:

- Shopping Mode: Provides a complete shopping process including product browsing, shopping cart, orders, and payment.
- Showcase Mode: Allows merchants to create a product showcase website without enabling shopping and order functions.

The system mainly provides:

- Product display and management
- Member management
- Shopping cart and order management
- Payment and refund management
- Delivery management
- Customer service system
- Store website customization

2. User Features

2.1 Product Display

Basic Features

- Display products on the homepage
- Create product display sections based on product categories
- Display featured products in each section
- Other products can be accessed through the "Learn More" button to category pages
- Product search function
- View product details

Advanced Features

- Product recommendation
- Personalized product recommendation

2.2 Member System

Basic Features

- User registration
- User login
- View member information
- Edit member information

Advanced Features

- Membership level system
- Point accumulation system
- Redeem points for discounts
- Exclusive benefits for different membership levels

2.3 Shopping Process

Basic Features

- Add products to shopping cart
- Shopping cart management
- Modify product quantity
- Create orders
- Checkout confirmation page
- Payment information confirmation
- Order inquiry

2.4 Order Management

Basic Features

Users can:

- View order history
- View order details
- View order status
- View delivery information

Order status:

- Pending
- Shipping
- Completed

2.5 Delivery Management

Basic Features

- View delivery methods
- View delivery status
- Estimated shipping date
- Estimated arrival date

2.6 Customer Service System

Basic Features

- Create customer service requests
- Select problem type
- Fill in problem description
- Upload related images
- View customer service replies

Advanced Features

- AI real-time customer service
- Automatic FAQ responses

3. Admin Merchant Management Features

3.1 Product Management

Basic Features

Admin can manage:

- Product name
- Product description
- Product price
- Product category
- Product images
- Product status

Product image management:

- Upload multiple images
- Image sorting
- Set primary image

Advanced Features

Product specification management:

- Multiple product specifications
- Different price settings for each specification
- Different inventory settings for each specification

3.2 Product Category Management

Admin can:

- Create product categories
- Edit product categories

- Set category sorting
- Enable / Disable categories
- Soft delete categories

3.3 Order Management

Admin can:

- View all orders
- View order details
- Modify delivery status
- Manage order process

3.4 Payment Management

Supported payment methods:

- Credit Card
- ATM Transfer
- Postal Transfer
- Cash on Delivery
- In-store Payment

Payment status:

- Pending
- Paid
- Failed

Merchant confirmation:

- Waiting for Confirmation
- Confirmed
- Rejected

Advanced Features

- Logistics tracking management
- Integrate logistics service API
- Real-time update delivery status
- Provide logistics tracking number inquiry
- Allow users to view delivery progress

3.5 Refund Management

Admin can:

- View refund requests

- Review refund requests
- Fill in replies

Refund status:

- Pending
- Refund Approved
- Refund Rejected

3.6 Website Customization Management

Admin can modify:

- Product images
- Product text
- Homepage Banner
- Slider images
- Background images
- Footer information

3.7 Homepage Product Section Management

Admin can:

- Create multiple product display sections
- Select featured products
- Set product arrangement method
- Set the number of products displayed on the homepage

3.8 Store Settings Management

Admin can configure:

- Store basic information
- Payment methods
- Delivery methods
- Customer service functions

Feature control:

- Enable / Disable delivery function
- Enable / Disable customer service function
- Switch between Shopping Mode / Showcase Mode

4. Future Expansion Features

4.1 AI Features

Planning:

- AI customer service
- Product recommendation
- Automatic FAQ responses

4.2 Cloud Deployment

AWS Integration:

- Deploy backend with EC2
- Manage database with RDS
- Store product images with S3
- Accelerate images with CloudFront

4.3 Website Template System

Version 2 Planning:

- Multiple website templates
- Merchant-selected website styles
- Custom brand colors
- Custom homepage Layout

5. Features Under Consideration

Currently considering:

- Admin registration system
- Super Admin management of merchant accounts
- Email notifications
- LINE notifications
- User suspension management
- Inventory change records
- Purchase history analysis
